- (2) The main function of the touchpad is to move the cursor, select and confirm the item
- (3) copy/ pasty and other functions can be available in the help of the left/mouse mouse key

4 Troubleshooting:

the following are some common problem and useful tips . You can also email us or leave messages on our social platform by searching ipazzaportfans on facebook, twitter, YouTube, Google+

4.1 No response on the keyboard

(The USB receiver has be paired with the keyboard in factory) it is much easy to connect it with other device through USB (plug and play) and you don't have to pair it next time for its auto memory function.

Please follow the steps below if you fail to connect it with other device

- (1) to make sure the USB receiver is not loose in the USB port
- (2) to make sure the keyboard is not in low power capacity
- (3) to make sure the keyboard is powered on
- (4) to make sure the PC is not too old-fashioned to recognize the USB

Useful tips:

- (1) pull out and plug the USB receiver into the USB port and wait for a few seconds(It will take the PC some seconds to recognize the USB receive
- (2) If one of the indicators blinks even without any operation on the keyboard ,the keyboard is in low power capacity .Please replace the batteries timely
- (3) please switch the power button to the position "on" (a blue light will blink several times and then go off)
- (4) to check out if the system requirement of the keyboard is compatible with the PC

Attention :

Please turn to the last resort if all the tips above fail (Your PC has recognized the USB receiver but still no response on the screen after you power on the keyboard and slide on the touchpad, which means the USB doesn't pair with the keyboard in advance.) : pull out and plug in the receiver in the PC USB port and press 'Fn+F1" as soon as you can. When the indicator goes off, the keyboard will recognize the USB successfully.

4.2 bad and interrupted connection

This may result from these reasons below that you should check out:

- (1) Please make sure the resource signal is strong enough and both the devices are in good condition.
- (2) Frequency interference always exists ,but we could still do something is to reduce it to the bottom by shutting off some other unnecessary units around ,or putting the keyboard closer to the PC or TV box.
- (3) Make sure your keyboard are not in low power capacity status .
- (4) Signal strength may result from some stuffs between the keyboard and PC, so just put away the suspected stuffs between each other.
- (5) To reduce the frequency interference from the PC itself, you may plug the USB receiver into the port of an external cable USB port instead of directly in the PC USB port.
- (6) to make sure the keyboard is compatible with the PC by referring to the system requirement of the keyboard
- (7) the signal may be interrupted by uncertain reasons ,you may pull out the USB receiver or turn off the keyboard to restart the basic connection from beginning.
- (8) The keyboard have an automatic sleep and wake mode to prolong the standby time, you may click any key to wake it up before you slide or click on the touchpad

4.3 weird touchpad

- (1) About the touchpad sensitivity: You may adjust the touchpad sensitivity by press the key "Fn" and the spacebar between the key "AIT" and "AIT " (two levels are available)
- (2) Touchpad performance is confined to the wireless connection, so you make sure the signal and wireless connection are in good condition.(you may refer to the troubleshooting part " the bad connection")
- (3) Please refer to the basic gesture recognitions we stated in the page 7 (how to use the touchpad)
- (4) please slide or click on the right place and with correct gestures,
- (5) We produced a specific article to solve problem about the touchpad which contains more detailed descriptions and tips , please refer to our official site---news- 'How to make best of the touchpad and scrollbar on mini keyboard ?"
-http://ipazzport.com/en_article.asp?id=19
- (6) Please keep our thanks card or download the latest user manual or email us or visit and leave messages on our social platform by searching ipazzportfans

4.4 The multi media keys can't work

Update player version or install relevant driver.
